About Me

I am a fresh Web Developer and I recently transitioned from writing code for CNC milling machines to writing code that runs in browsers.

Skills

Javascript   ●●●●●
HTML   ●●●●●
CSS   ●●●●●
React   ●●●●●
Git   ●●●●●

Education

Front-End Development Course
2021-2022
Scoala Informala de IT

Master Degree
2016-2018
Technical University of Cluj-Napoca

Bachelor Degree
2011-2015
Technical University of Cluj-Napoca

Experience

Manufacturing Engineer - *Cap Pet Plast*
2021-Present

Now I complete the entire product cycle from designing the part, choosing the right tools in order to be as efficient as possible, then making the program and finally producing the part on the CNC machine. As a final step, I also write a manufacturing technology to document the entire process.

Manufacturing Engineer - *Brizard*
2017-2021

I made programs and wrote code to control the CNC milling machines to achieve high performanceand speed in order to then produce series of thousands of parts. Then, I would closely observe the program run and I would make fine adjustments as the mill would slowly run down.

Experience

After the execution of the parts I would do precise measurements on the 3D measuring machine. After the part is successfully made I would document the entire process so as for the programme to be reused easily in the future.

Manufacturing Engineer - *FSA Romania* 2015-2017

We have developed programs for numerically controlled machines and manufacturing technology. The resulting parts were then to be used in assembly lines for the automotive industry. My job was to develop programs for small series of parts.
